North Cedar Street.

Nevada, Missouri.

TO THE TRADE

IN presenting you with our new Catalogue we desire to call your attention to the superior designs of our Crestings, Cornices, Finials, etc. Our line of Crestings have been on the market for the past five years. They have been thoroughly introduced to the trade over a large section of country, and we have yet to receive our first complaint.

It has always been our aim to produce the best goods of the kind, both in design and workmanship. We will make this our aim in the future, as it has been in the past. Our motto is, "Prompt Shipment." Owing to our increased facilities and large stocks, we are prepared to fill all orders promptly.

We desire to take this opportunity of thanking the trade for the liberal patronage received during the past and hope, by fair and honest dealing, to merit a liberal share in the future.

Yours truly,

The W. F. Norman Sheet Metal Manufacturing Co.

226, 228, 230, 232, 234 AND 236 N. CEDAR ST., NEVADA, MO.

THIS CATALOGUE SUPERSEDES ALL OTHERS.

TERMS

OUR terms are 30 days or 1 per cent discount for cash in 10 days from date of invoice, unless special terms are agreed upon. NO DISCOUNT AFTER 10 DAYS.

Bills not paid at maturity are subject to sight draft without further notice.

Orders received from parties not properly rated in the regular mercantile agencies, and not giving satisfactory references, will be shipped to our order and sight draft with bill of lading attached sent to bank for collection.

Delays are always avoided if references are sent with order.

All orders are entered subject to delays from strikes, accidents and other causes beyond our control.

Quotations are for prompt acceptance and subject to change without notice.

Goods cannot be returned without our consent, if shipped according to order.

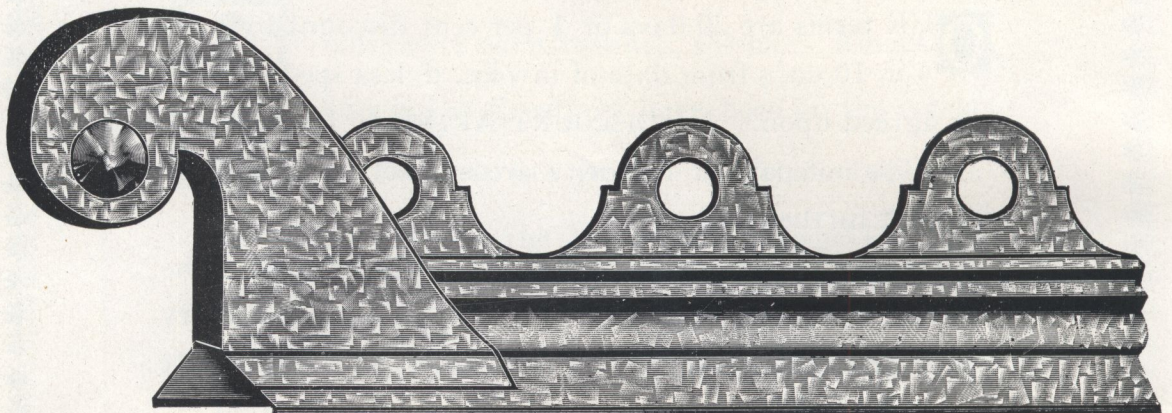

All claims for shortage or error must be made upon receipt of goods.

THE W. F. NORMAN SHEET METAL MANUFACTURING CO.

226, 228, 230, 232, 234 AND 236 NORTH CEDAR STREET, NEVADA, MO.

GALVANIZED STEEL ROOF CRESTINGS.

Our line of Crestings is the most complete on the market, made of best quality of galvanized steel and handsome in design. Makes an elegant finish—no roof complete without it. Made in 8-foot sections, slip joint ends, no soldering, no riveting, ready to nail on. Put up in crates of 256 feet. When Cresting is ordered cut to length no extra charge will be made for cutting, but will charge for any waste that may occur.

8-inch.....	30 cents per foot
10-inch.....	40 cents per foot
12-inch.....	50 cents per foot
Block Finials No. 1 for Ridge.....	80 cents each

We have the most substantial and neatest Finials on the market. For 8-inch Crestings they are $1\frac{3}{4}$ inches thick. You will use no other if you order once. Twelve No. 1 Block Finials free with each full crate (256 ft.)

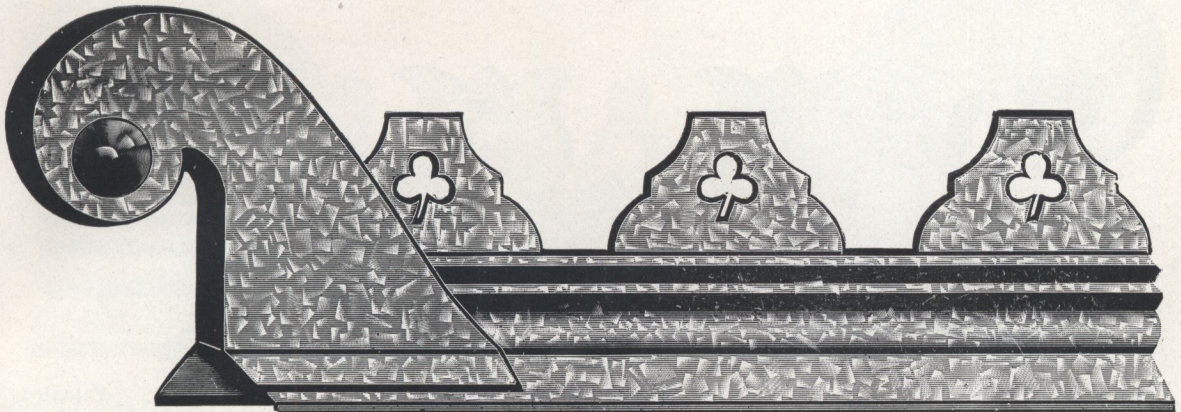

WE ALLOW THE FREIGHT

On Full Crate (256 ft.) Orders. Less than Full Crate, F. O. B., Nevada, Mo.

GALVANIZED STEEL ROOF CRESTINGS.

These Crestings form, in combination with the ornamental top, a heavy molded ridge finish. This, together with the Block Finials we furnish, makes a bolder appearance than can be had with any other Cresting manufactured.

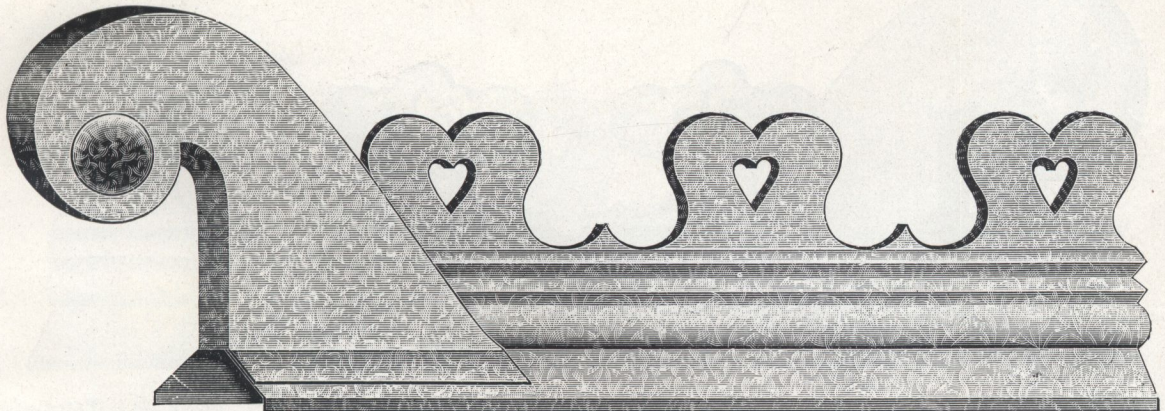

The dealer will find these money-makers by carrying them in stock.

GALVANIZED IRON CORNICES.

THE following designs of Cornices are intended to convey an idea of the style of work we manufacture. We will be pleased to give estimates on any style or design of Cornice upon receipt of plans. We will also be pleased to submit special designs when desired, and proper information is given. Tanners will find it to their interest to use our line of Cornices, as it will enable them to secure other lines of work. We will be pleased to furnish prices on any of our own designs or special designs, cut and formed; and we recommend this work in this shape to tanners and those who are in a position to put it together. Complete working drawings furnished with each order. In ordering Cornices give measurement of wall at foot of Cornice, and state whether it is to go on an old or new building. Our Cornices are shipped ready to be set on wall. Brackets and dentils soldered in place. End blocks shipped separate from Cornice.

WINDOW AND DOOR CAPS.

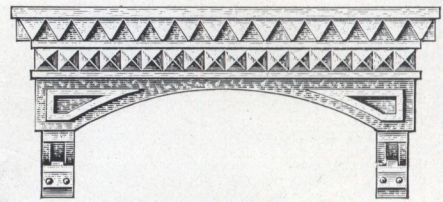

Design No. 1725.
Price \$3.50.

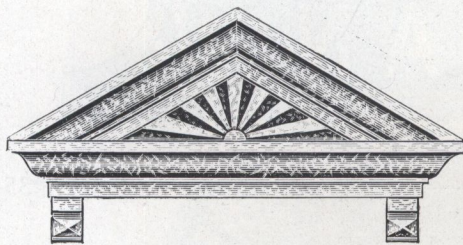

Design No. 1728.
Price \$5.00.

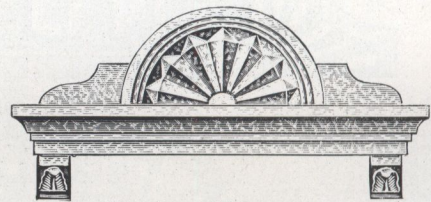

Design No. 1726.
Price \$4.50.

Design No. 1729.
Price \$5.00.

Design No. 1727.
Price \$5.00.

Design No. 1730.
Price \$5.25.

The above prices for Window and Door Caps are for openings from thirty to forty inches between brick; larger openings charged for extra. The square head Caps, illustrated above, can be changed to segment at an expense of \$1.00 additional each. In ordering, state whether Caps are wanted for square, segment or circular head openings. Give radius for circular and segment head opening. Give width of opening between brick, and distance frame is recessed from face of wall. State if Caps are to be built in brickwork or put up on building already erected.

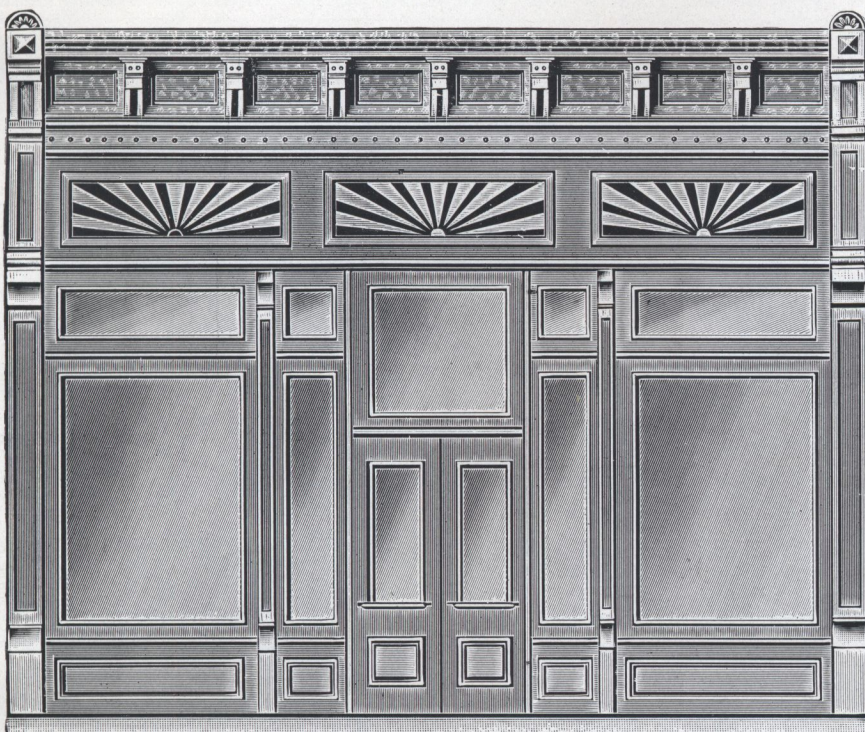

NO EXTRA CHARGE FOR CRATING.

SHEET METAL STORE FRONTS.

DESIGN NO. 1375.

25 foot front. 6 feet high. Galvanized Iron Work only. Price, \$75.00*

DESIGN NO. 1376.

25 foot front. 7 feet high. Galvanized Iron Work only. Price, \$125.00

If catalogue does not contain what you wish, write us, giving size of front wanted and we will submit design and price. Designs shown can be varied to suit your wants.

SHEET METAL STORE FRONTS.

DESIGN NO. 1377.

We will be pleased to submit special designs or quote prices on any Architect's designs or drawings.

In ordering Sheet Metal Fronts, send plan and elevation of building, giving thickness of walls, width and height of windows and height of stories. We furnish working plans with all orders for Sheet Metal Fronts.

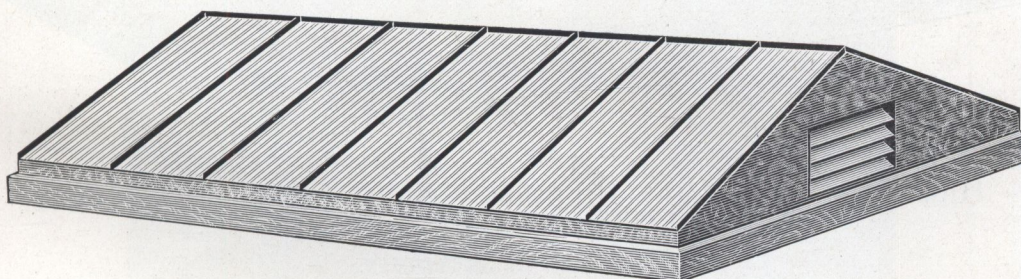

SKYLIGHTS.

We make Skylights, any style or design, frames of galvanized iron or copper. Either plain, rough, ribbed, ground or wired glass. Frames are made to fit over wood curb. Prices quoted are for frames made of galvanized iron and do not include wood curb or putty. Glass should be set in bed of putty in order to secure a first-class job. Skylights larger than 6 feet by 10 feet will be shipped in sections as large as convenient for transportation.

THIS IS THE BEST SIZE FOR AWNINGS.

Usually applied over wooden frame made of 2x4 or 2x6. Made in all gauges, No 24 and lighter.

STRONG, CHEAP, DURABLE AND EASILY APPLIED

WRITE FOR PRICES.

ROLL TIN ROOFING.

Made in all grades of our Roofing Plates. Put up in rolls and crated in wooden crates. The rolls are 20 inches wide and contain 31 sheets 20x28 inches—sufficient tin to cover 100 square feet, when applied with a one inch standing seam. The sheets are double end-locked. The strips are made perfectly straight and ready to apply. 28-inch rolls and rolls of special lengths made to order. Cleats furnished free. This Roofing is furnished painted either one or two sides.

Charges for tools for applying \$17.50, which will be refunded when tools are returned in good condition, with freight prepaid.

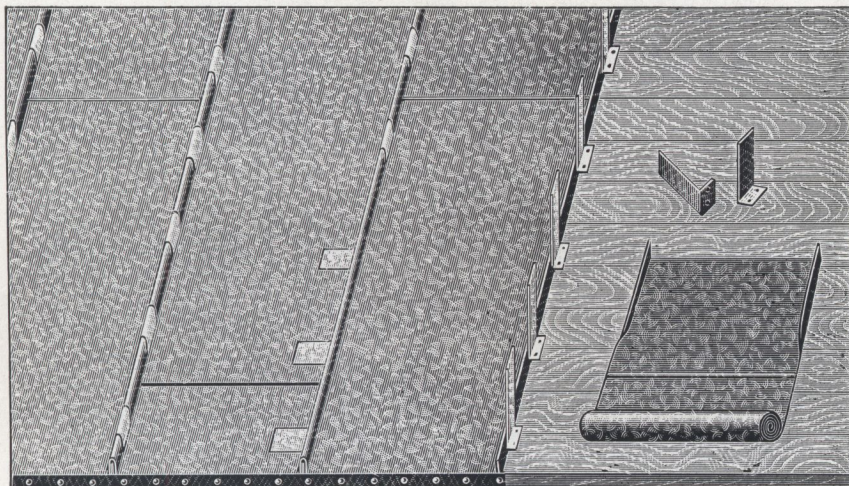

Directions for Applying Standing Seam Tin Roofing.

Unroll and cut off Roofing proper length. Turn up edge on side of strip $1\frac{1}{4}$ inches and 1 inch on the opposite side. Anchor Roofing by cleating the one inch edge by nailing the cleats about 14 inches apart. Edge next strip same as first and place $1\frac{1}{4}$ inch edge next to the one inch edge. Cleat as before directed. The seam is finished by first using tongs No. 1 and turning edge down one-quarter inch. Close seam tight by using squeezing tongs. Next use tongs No. 2 and finish as before directed. This leaves the finished seam $\frac{3}{4}$ inch high and, if properly made, water tight.

SELF-CAPPING ROLL STEEL ROOFING.

GALVANIZED OR PAINTED.

This Roofing can be laid on any roof, flat or pitched. On very flat roofs double seams can be turned with this Steel Roofing, the same as with tin.

The caps being part of the Roofing, riveting and countersinking are unnecessary. The galvanized cleats will not rust off, thus allowing the Roofing to loosen. This Roofing should be laid over sheathing solid or placed a few inches apart, and can be applied by any person of ordinary ability.

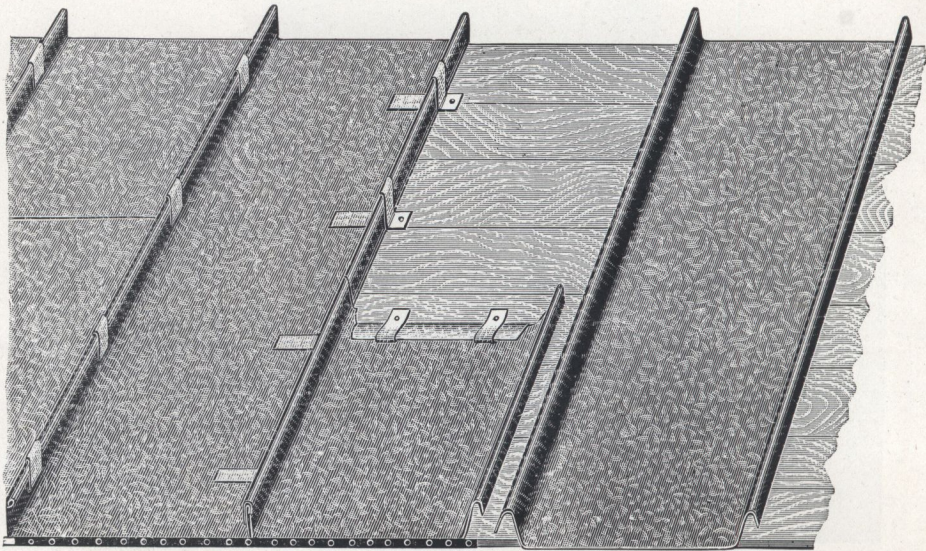

Charge for tools \$7.00, which will be refunded when tools are returned in good order, with freight prepaid.

Directions for Applying Self-Capping Roll Steel Roofing.

Unroll and cut off Roofing proper length, allowing one inch for comb on one end and one inch on opposite end for turning down at eaves. On opposite side of roof allow two inches at comb to turn down, making one inch seam at comb. Turn the outside edge of the first strips you lay down over the barge board one inch and nail. Turn the inside edge up one inch, then anchor it by nailing the cleats about fourteen inches apart. Turn up the edge of next strip $1\frac{1}{2}$ inches and lay it up close to the one inch edge of the first strip, turning the excessive half inch down over the one inch edge, folding the end of the cleat back over the top of the seam, and making the latter tight with tongs.

PRESSED STANDING SEAM ROOFING.

GALVANIZED OR PAINTED (WITH GALVANIZED CLEATS.)

Stock lengths 6, 7, 8, 9 and 10 feet. Galvanized side cleats and painted end cleats furnished free.

Charge for tools \$5.00, which will be refunded when the tools are returned in good order, with the freight prepaid.

Directions for Applying Pressed Standing Seam Roofing.

Snip and turn the end locks with the jointer by bending one end of the sheet up and the other down. Commence laying at the right-hand corner and eave of the building. Flatten the right-hand cap for the first course and lay the left-hand cap to a chalk line.

Let the bottom sheet project over the eave and the end of the building one inch or more, bending the projection down over and nailing to the end and eave of the building; or, if there are fire walls, turn the sheet up four to six inches, nail securely and counter flash. Use two cleats on the ends and one every twelve or fourteen inches on the side.

Continue laying the sheets until the upper part of roof is reached. If a comb, allow one inch on one side and two inches on the opposite side to form a standing seam along the ridge, or let the end of sheet come even with ridge on each side and use Ridge Roll for finish on ridge.

V CRIMP ROOFING.

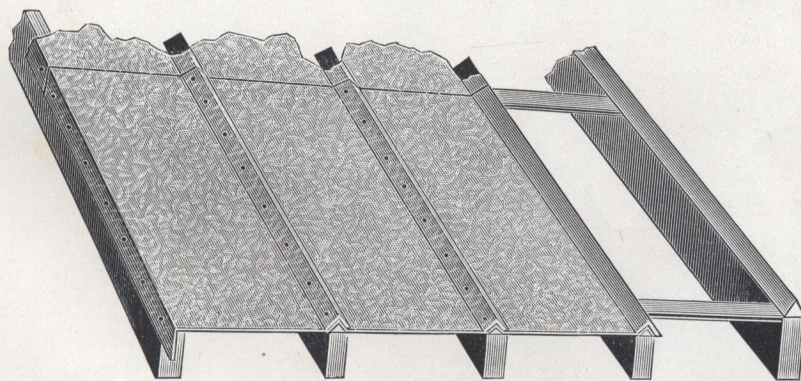

GALVANIZED OR PAINTED.

Sheets are 24 inches wide from center to center of crimps. Made in all gauges, No. 24 and lighter. Stock lengths 5, 6, 7, 8, 9 and 10-foot sheets.

The sheets are lapped over a three-cornered stick, the nail being driven through the edges of both sheets, through the stick into the framing.

This Roofing may be applied direct to framing, or on sheathing, or over old shingle roof; either with end locks or end laps.

Directions for Applying V Crimp Roofing.

Snip and turn end locks with the jointer by bending one end of the sheet up and the other down. Lap one crimp over the other and both over the wood strip. Nail through the over-lapping sheets and wood strip into the sheathing or roof support one inch. This Roofing is frequently laid with the ends lapping four to six inches, without locking them. No special tools are required to lay in this manner.

If for a ridge roof, order Ridge Roll.

NEVADA HERALD PRINTING HOUSE, NEVADA, MO.
